DETAILED ACTION

Claim Objections

Claim 8 is objected to because of the following informalities: Instead of a wiring board should be wiring base (line 2). Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Carli GB Patent No. 2,333,647.

Carli discloses an armature construction for a rotating electrical machine comprised of a core consisting of a plurality of laminated plates having a circular member from which a plurality of pole teeth radially extend, a pair of insulators (2) positioned on opposite axial sides of said core and having tooth engaging portions encircling said pole teeth to receive coil windings, a wiring base (6) positioned on one axial side of one of said insulators (2), said wiring base (6) being made from an insulating material and adapted to receive the wire ends of the coil windings, and interconnecting members (8) formed on said one insulator and said wiring base for

connecting said wiring base in a predetermined axial, radial and circumferential position. The interconnecting members comprise a pair of interconnecting elements (8), one on each of the insulator (7) and the wiring base (6).

Page 3

2. Claims 1-5 and 8-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Michaels et al. U.S. Patent No. 6,856,055.

Michaels discloses an armature construction for a rotating electrical machine comprised of a core consisting of a plurality of laminated plates having a circular member from which a plurality of pole teeth radially extend, a pair of insulators positioned on opposite axial sides of said core and having tooth engaging portions encircling said pole teeth to receive coil windings, a wiring base (100) positioned on one axial side of one of said insulators, said wiring base (100) being made from an insulating material and adapted to receive the wire ends of the coil windings, and interconnecting members (129, 108) formed on said one insulator and said wiring base (100) for connecting said wiring base in a predetermined axial, radial and circumferential position. The interconnecting members comprise a pair of interconnecting elements (129), one on each of the insulator (22) and the wiring base (100). Also the wiring base (100) has a cylindrical flange (108) for assisting the radial position of said wiring base (100).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2834

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 6-7 and 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Michaels et al. U.S. Patent No. 6,856,055 in view of Carli GB Patent No. 2,333,647.

Michaels discloses the claimed invention except for the interconnecting member being hooks and receiver therefore. However Carli discloses a hook (8) as interconnecting member for a wiring base (6) in order to fix said wiring base with the insulator (7).

Therefore it would have been obvious to one having skill in the art at the time the invention was made to provide a hook and receiver for said for since that would had been desirable fixing or engage said wiring base to the insulator as disclosed by Carli.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yahveh Comas whose telephone number is (571)272-2020. The examiner can normally be reached on 8am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
